

RESULTS REMARKABLE SAYS NEW YORK MAN

Prominent Rochester Citizen Tried Ten Years To Get Relief, But Tanlac Is Only Thing That Helped Him.

One of the latest to testify regarding the powers of Tanlac, the celebrated medicine which has been accomplishing such remarkable results, is James J. Beasley, 102 Elmdorf Avenue, Rochester, New York. Mr. Beasley has been chief record keeper for the Department of Water Works, city of Rochester, for thirty years and is a well known and highly respected citizen. In referring to the remarkable recovery of his health by the use of Tanlac, Mr. Beasley said: "I have been trying for ten years to find relief from a case of dyspepsia. Nothing ever helped me to amount to anything until I got Tanlac. This is saying a great deal, for I did everything it seems that a man could do to find relief. Of course, I was hardly ever sick enough to go to bed and was most always able to keep going, but I just never felt right. At times during those ten years, my stomach would become sour like vinegar. I would have an uncomfortable bloated up feeling after eating that would last for hours. I suffered a great deal from nausea. At times my heart would flutter and palpitate and I would become alarmed over my condition. My nerves were on edge all the time, and I became irritable, nervous and restless. I had no strength or energy to do anything. In fact I wasn't like myself at all. Even a week or two ago it was an effort for me to get out of my chair and I felt as stiff and clumsy as an old work horse."

"old work horse."

"It is really remarkable what Tanlac has accomplished in my case. It has relieved me entirely of indigestion. I never have that distressing feeling any more after eating, and I feel perfectly fine in every way. I will always feel grateful for what this wonderful medicine has done for me and I am only too glad to give it my heartiest endorsement."

RAT IS SERIOUS ENEMY OF WORLD

No Other Animal or Insect Is So Dangerous and Persistent in Doing Harm.

INFLECTS IMMENSE DAMAGE

Value of Food and Property Destroyed Annually by Each Individual Rat Is Estimated at \$2—Is Efficient Germ Carrier.

(Prepared by the United States Department of Agriculture.)

The necessity of a campaign of unvarying efficiency against the common brown rat, is an outstanding one. No other animal or insect is so dangerous and persistent an enemy, and no other enemy succeeds in inflicting the damage that the rat annually imposes upon humanity. The rat population of the United States is at least equal to the human population, and the same ratio holds true for practically every country under the sun. The bureau of biological survey, United States Department of Agriculture, places the value of the food and property destroyed annually by each individual rat at \$2. Keeping well within the boundaries of conservatism this means that each year, in this country alone, we produce \$200,000,000 worth of food to no other purpose than to feed our rats. In another way, 200,000 men in the United States are devoting all their labor to the maintenance of 100,000,000 rats.

Is Efficient Germ Carrier.

But the rodent's enmity is far from being satisfied by this huge economic injury. A frequenter of all the places that are vile and loathsome, the rat is a most efficient germ carrier. The germs of the dreaded "black death" have killed more human beings than all the wars of the world's history, and these germs are introduced into the human system by the bite of a rat flea. In India, no longer ago than 1896, the bubonic plague killed 9,000,000 persons. In Europe, during the fourteenth century, it is believed to have brought death to 25,000,000 human beings. Other diseases, almost as dreadful, are traced to the common rat. Thus, from the standpoint of public health, as well as from the necessity of controlling the drain upon the public purse, it is essential that the rat be exterminated. Once the extermination is complete, or as nearly so as modern methods will permit, every precaution must be taken to prevent the rat from multiplying and regaining lost ground.

Exterminating Plans.

Trapping should be done continuously and systematically at all rat-infested places. Rat poisons, especially barium carbonate preparations as recently de-

veloped by the biological survey, should be employed. In furthering the destruction of the rat, community or civic organization is of the greatest importance. It does no good to drive the rats from one cellar into the next if they are allowed to breed unmolested in their new quarters. When the campaign is made general the pest is allowed no rest and no opportunity to trench in a new position. If one pair of rats is left they reproduce the original number in a little while, as rats breed five or six times a year with an average of ten to the litter.

In connection with the extermination campaign, preventive measures should be employed against the rodent. First among these is the protection of all food supplies. This is of prime importance. The removal and destruction of refuse is the next step in prevention, as abandoned dumps and piles of waste material furnish excellent shelter and food for the rats that have been driven from the houses and cellars.

Building Should Be Rat Proof.
All buildings should be rat-proofed by the liberal use of cement and tin. Rat-proofing should be a prominent specification in all new construction and it should be applied to older buildings in the form of repairs. All drain outlets should be sealed with wire cages, or similar protective devices.

With the food supply locked away from him, and his shelter gone, starvation and exposure will add to the effectiveness of work with traps and poisons and the menace of the rat will cease to be a real hazard against American lives and property.

HENS WITHOUT WHEAT GIVE GOOD RESULTS

More Eggs Obtained From Pen of Rhode Island Reds.

Mash Containing Only 15 Per Cent Meat Scrap Gave Very Satisfactory Results—Experimenting With Green Feeds.

(Prepared by the United States Department of Agriculture.)

Poultry-feeding experiments conducted by the United States Department of Agriculture, last fiscal year, show that practically as good results can be obtained without wheat as with it in a ration. The Rhode Island Reds, in the wheatless pen, averaged 140 eggs, while those in the pen receiving wheat averaged 134 eggs. Good results were obtained with the use of garbage until the warm weather began, when there was considerable mortality, due apparently to the garbage spoiling. This work is being repeated this year with much more satisfactory results. The garbage being fed in a trough on a large wooden feeding board, which prevents it from getting on the ground and decaying.

In the use of vegetable proteins the relative order of production is the

Give Poultry Right Kind of Feed at Fixed Periods.

same as it was last year. No success has followed an attempt to substitute completely vegetable protein for animal protein. The ration used last year, a mash containing only 15 per cent meat scrap as compared with 20 to 25 per cent in the ordinary mashes, gave very satisfactory results with the heavier breeds, especially the Plymouth Rocks, in keeping the birds in good physical condition and fertility. Though the egg yield was not quite so good as when the higher per cent of meat scrap was used.

New experiments were begun during the year with green feeds, comparing alfalfa meal with sprouted oats and comparing these rations with one in which vegetables were supplied. While none of these green feeds have shown marked increased production over any other, the results have emphasized the importance and value of that form of food when given in a variety.

BURN CHINCH BUG NESTS

Chinch bugs have made their appearance in certain parts of the United States.

One chinch bug destroyed now may prevent the production of hundreds to infest your wheat field later.

Chinch bugs pass the winter and early spring in wild grass and leaves, especially along hedges and fences and in the edges of woodlands adjoining cultivated fields.

Burn grasses, leaves and other trash where the bugs may have found winter refuge. The bugs not burned will be killed by exposure to the weather.

Clean up all trash and rubbish which may harbor the insects in winter.

IMPORTANT GRAIN SORGHUMS

Dwarf and Early Varieties Are Best for Higher and Drier Districts—Essential Hints.

The more important grain sorghums are included in two groups of varieties, the kafir group and the milidura group. Dwarf and early varieties in both groups are best for the higher and drier districts. The use of good seed of adapted varieties, a well-prepared seedbed, clean cultivation, and the right method of handling after harvest will increase the yield and quality of the grain.

EXCELLENT FOR LAND'S SAKE

Where Sweet Clover Does Not Thrive Well an Application of Limestone Is Favored.

Sweet clover is an excellent plant to grow for the land's sake under many conditions, and where it does not grow well now it can be made to grow well by applying ground limestone to the soil. It will add humus and nitrogen to the soil rapidly when plowed under, thereby increasing the fertility of the soil in these essential factors.

Important to all Women Readers of this Paper

Thousands upon thousands of women have kidney or bladder trouble and never suspect it.

Women's complaints often prove to be nothing else but kidney trouble, or the result of kidney or bladder disease.

If the kidneys are not in a healthy condition, they may cause the other organs to become diseased.

You may suffer pain in the back, headache and loss of ambition.

Poor health makes you nervous, irritable and may be dependent; it makes any one so.

But hundreds of women claim that Dr. Kilmer's Swamp Root, by restoring health to the kidneys, proved to be just the remedy needed to overcome such conditions.

Many send for a sample bottle to see what Swamp Root, the great kidney, liver and bladder medicine, will do for them. By enclosing ten cents to Dr. Kilmer & Co., Binghamton, N. Y., you may receive sample size bottle by Parcel Post. You can purchase medium and large size bottles at all drug stores.—Adv.

Snowsheds as Highways.

The wooden snowsheds of the Southern Pacific railway across the Sierra Nevada mountains may become highways for motorists. It has been proposed to reconstruct these of concrete and frame the tops as roadways for automobiles.

FRECKLES

Now is the Time to Get Rid of These Ugly Spots.

There's no longer the slightest need of feeling ashamed of your freckles, as Othine—double strength—is guaranteed to remove these blemishes.

Simply get an ounce of Othine—double strength—from your druggist, and apply a little of it night and morning and you should soon see that even the worst freckles have begun to disappear, while the lighter ones have vanished entirely. It is evident that more than one ounce is needed to completely clear the skin and gain a beautiful complexion.

Be sure to ask for the double strength Othine, as this is sold under guarantee of money back if it fails to remove freckles.

Feel All Worn Out?

Has a cold, grip, or other infectious disease sapped your strength? Do you suffer because lack ambition, feel dull and depressed? Look to your kidneys! Physicians agree that kidney trouble often results from infectious disease. Too often the sufferer doesn't realize they have broken down under the strain of filtering disease-created poisons from the blood. If your back is aching, your kidneys act irregularly, and you feel all run down, use **Doan's Kidney Pills**. Doan's have helped thousands. Ask your neighbor!

An Oklahoma Case

John S. Hager, Pawnee, Okla., says: "I had a constant dull ache through the small of my back. When ever I stooped over I felt a twisting pain dart through my kidneys and could hardly straighten up. I didn't suffer long, however, but when I learned of Doan's Kidney Pills I bought some. This medicine gave me relief from the first. I kept on taking it and it permanently cured me."
